PROG6212 POE PART 2

Submission

POE PART 1 FEEDBACK

For Part 1 I needed more elements to make it a bit more user friendly and the color was well done, although one of the most important parts of the scenario, which is the academic coordinator panel of the site, was not included in the Part 1 submission. I had learned from the mistake I made of not including the admin side and decided to improve upon it, based on my initial submission. Brightly colored buttons and a balance between bright and dark colors in my elements ,were to ensure the readability of the information presented within the site and the functionality has also been added to the site such as every checking and all that was required for the submission.

HOW TO RUN AND OPEN THIS PROJECT

1)To run this project you will have to download the zip file from the git hub repository .Once the project has been downloaded ,place the project in your repo along with the other projects and unzip the project.After going into visual studio and tap on open project solution and select the c# project file within the project and from there you will be able to perfrom the next step.

 2) The next step is to add your connection string ,go to the view tab and open up your SQL object explorer and right click on your preferred to get the connection string. After copying the connections string paste it in your appsettings.json . This is what connects the project to your local server IF YOU DO NOT HAVE A DB CREATED :Right click on the server ,select new query and right this query : CREATE DATABASE databasename; to create your database.

3) Migrations For the project to work you also need to remove and add a new migration ,to do so run these commands in your package manager console which will be found in your tools tab:

Update-Database InitialCreate //To revert to initial migration

 Remove Migration //Remove the current main migration

Update Database //Update the database after removal of migration

Get-Migration //checks if it has been removed

add-migration AddClaims //to add a new migration

Update-Database //ensures that the migration is applied to the database
Get-Migration //checks if the newly added migration has been applied

After this go to the build tab and "rebuild solution" ,after the solution has been rebuilt successfully you can now press the play button and run the project.

My screens

Figure 1 Claims view page that shows all the claims made

Figure 2 Review Page where the admin either rejects or accepts the claim with the option to download supporting documents

*Figure 3 This is the form where the users enter their info and post claims*

Figure 4 The profile page where the user can choose their dashboard,coordinators review claims,lecturers post them
